

Digatron: #1 global supplier for battery test and formation systems

Profile:

Digatron Power Electronics is one of the leading companies for battery testing electronics and also one of the oldest.

Founded in 1969 by Rolf Beckers it is still family owned, this means independence.

We have subsidiaries in Italy, USA, India and China.
In Italy we also own a company that produces equipment for battery production: Digatron Systems.

Worldwide we have > 400 employees, in Germany 111.

Our systems are used as test systems for development and quality assurance, simulation systems for testing electric vehicle batteries, formation systems for the initial charging of cells and batteries, as well as turnkey solutions such as fully equipped test containers or fully automated formation systems for Li cells.

Here we work closely together with our subsidiary Digatron Systems.

Our worldwide customers include cell and battery manufacturers, automotive manufacturers and suppliers, manufacturers of battery-powered devices and tools, universities and research institutes and all users where batteries are used.

USP

Experience and know how.

Target:

E-vehicles Manufacturers both established and startups.

Battery Manufacturers.

Relevant Institutions and Organisations.
