

## Voitas: creating innovative engineering solutions

## Profile:

At VOITAS we are on a journey to continuously optimize our engineering and connect innovations with products for an inspiring and exciting future. Following our passion for new technologies, we provide solutions of the highest quality.

Thanks to the many years of experience of our engineers, we offer a wide range of services designed with specific needs and expectations in mind. We help our clients to combine innovations within their products to create the future together.

Our activities focus on ADAS and electromobility -technologies of the future.

We combine our extensive experience in the construction and development of wiring systems with the software development of ADAS control units and create new architectures and methods from the prototype phase to series production. We are not only an engineering Partner for several OEMs like PORSCHE or AUDI, but develop our own e-mobility products like our brand new VOITAS Wallbox Premium. 100% self-developed and produced.

## USP

Agile startup with highly efficient processes and partially automated structures, 100% digital and online

We have the right project staff for special topics

TISAX Level 3 audited (IT security audit) We think outside the box and develop our own products We combine our ECU know-how with the wiring system Full-service partner from development to production and after-sales.

## Target:

Car manufacturers, both established and startups.

OEM's.

Charging solutions installers and dealers.
