## Company

Located in the heart of Europe Schmidt & Bender Germany and its subsidiary Schmidt & Bender Hungaria is a world-renowned supplier to the optical, electronics and defense industry. Our company has always been a reliable manufacturer of optical components and instruments.

## Main products and services

Our company manufactures lenses, aspherical lenses, flat optics, prisms, filters and various thin film coatings to individual customer specifications. Our state-of-the-art tooling and extensive, flexible manufacturing capacity ensure continuous availability and on-time delivery. Since our fibre optics division was established, we have been a stable supplier to many of Europe's renowned manufacturers of dental, medical and other instruments, and we also work with smaller companies. Our products include flexible fiber bundles, multi-fiber rigid rods as well as sheathed rods, which can be shaped to any desired form. We also produce our multifilament rigid rods with neatly arranged bundles of fibres, making them suitable for image transfer. We can also provide the manufacture and assembly of various accessories and sockets for our products, and can assist in the development and technical parameter setting process if required.

## Strengths

- Supply of customized optics: Prisms, Lenses (Aspheric/spheric), Microlenses, Kitted lenses, Achromats, Domes (180°)
- Own Coating capabilities: Filters, Windows
- Fiberoptics: Lightguides, Fiberbundles
- Optical Assembly

## Target clients

Companies which are using (the above mentioned) optical components in these final machines. The companies should not be optic related, but should have a demand of optics.
